Preliminary Findings:
Youth Covid-19 online survey:
Teen Mom (aged 15-19 years old)

10.8.2020

About the survey

- Online survey - Data collected from 1st June – 31 July 2020
- The survey was shared through the members of Children and Youth Council of Thailand and the networks of UNFPA and Unicef.
- **Ethical consideration**
 - **Privacy issues:** The questionnaires allowed respondents to keep some questions 'blank' in case that they might not want to answer.
 - **Confidentiality:** The survey was anonymous and self-administered. No personal identification information of respondents was recorded. The analysis was done by not disclosing any individual information, but as an overview.
 - **Informed consent:** Teen moms who accessed the link to the questionnaire would see information about the survey and were asked for their consent to be recorded in the database. There were 450 people who accessed the survey, and 95 were screened to be teen mothers aged between 15-19 years old and was consent to complete the survey after reading a message on study objectives, and risks and benefits of taking the survey.

Key findings

General information

- The online survey was completed by 95 teen moms aged 15-19 years old from 35 provinces. Majority of the respondents were from rural area.
- Large proportion of them are living with their parents, extended family
- Most of teen moms are never married and having only one child.
- Forty percent of teen moms already dropped out from school and among those who dropout 48% reported their childbearing was the reason.
- About half of them having paid job or income, but only 3% reported that the income is enough for their living.
- Teen moms and their families receive benefits, especially the subsidized money for child from birth to 6 years old. However, the benefits was reported as insufficient for majority of them.

General characteristics of teen moms in the survey

Age	n	%
15	6	6.3
16	15	15.8
17	23	24.2
18	20	21.1
19	31	32.6
Total	95	100
Mean	17.58	
Std. Deviation	1.268	

Marital status (N=95)

Number of children (N=94)

- Inclusion criterion: age 15-19 years old and having biological child(ren)
- 95 completed responses from 35 provinces including Bangkok, and majority (56%) are from rural areas
- Mean age is 17.58, and largest proportion is teen mom aged 17 years old
- 67% are never married, and these included those who are in some forms of relationships, i.e. being cohabiting with their partners
- All respondents already have child. 88% of them have one and 12% have two children

General characteristics – Living arrangement

Are you currently living with your child? (N=94)

If no, with whom your child is currently living with?

	n	%
Grandparents	6	60.0
Father's relatives	1	10.0
My relatives	3	30
Total	10	100

Living arrangement (N=94)

- Only about 10% of teen moms reported that they were not living with their children. Six of them had their children live with the grandparents, while the rest left their children with relatives either of themselves or of their husbands.

General characteristics - Education

- Only about 36% of 95 teen moms remain in educational system, either formal or non-formal system
- The question on education level was about the current level for those who still studying and the highest level completed for those who were not in education. Only one teen mom in this survey is at bachelor degree level of education. Based on their age, most of the teens mom are either in or finished primary and secondary level of education.

Highest education level completed

Educational level of those who dropped out	n	%
Primary school	25	67.6
Lower secondary	10	27.0
Upper secondary	1	2.7
Vocational	1	2.7
Total	37	100

Are you currently studying? (N=93)

Current level of study OR highest education level completed if not currently in education

Educational level	n	%
Primary school	36	41.4
Lower secondary	30	34.5
Upper secondary	17	19.5
Vocational	3	3.4
Bachelor	1	1.1
Total	87	100

- Over 40% or 37 teen moms already dropped out from school and the highest level of education among those who dropped out is upper secondary school and vocational.
- 26 out of 37 teen moms who already dropped out from schools reported that having childbearing was the reason**

General characteristics – Employment/Occupation

Which of the following describes your occupation?
(Before Covid-19 outbreak)

	n	%
Unemployed	25	26.9
Unpaid family work	8	8.6
Not working (studying)	10	10.8
Employee (private)	6	6.5
Own business (small)	1	1.1
Own business (large)	1	1.1
One-person business	10	10.8
Daily wage worker	32	34.4
Total	93	100

Which of the following describes your current occupation?
(During or after COVID19)

	n	%
Unemployed	34	36.6
Unpaid family work	7	7.5
Not working (studying)	6	6.5
Employee (private)	1	1.1
Own business (small)	3	3.2
Own business (large)	1	1.1
One-person business	12	12.9
Daily wage worker	29	31.2
Total	93	100

- Larger proportion of teen mom in this survey were employed or doing some business for income, both before and during or after COVID-19.

General characteristics – Financial status

Main source of money for spending (N=93)

I have income and enough for living

3.20%

I have income but not enough for living
63.40%

I have no income
33.30%

Do you currently have enough income? (N=93)
